

2071 FAIL SECURE ELECTRIC STRIKE

Electric Strike (Spiked)

280 Kg. Holding Capacity

Close Without Power
(Fail Secure)

High quality

12V DC

The electric door, which is also known as electric push to open, is connected to electricity after the lock strikers are replaced. If any product such as remote control, card reader, encrypted door vending machine, vending button is pressed, it acts as latch bolt and enables the door to be opened. It can be adjusted for both right and left sides. With 280 kg holding capacity, 2071 Fail Secure (Spiked) is in the closed position when the electricity is cut with the “Fail Secure” feature. In this way, in order to prevent security in case of power cuts, the doors remain locked, preventing theft.
