

K 280 M MAGNETIC LOCK

280 kg Pulling Force

Fail Safe

DC 12 V

Magnetic Locks are used in all doors requiring security such as building entrances, office doors. It can be easily controlled with remote control, encrypted unit, button and motion sensors. These systems, which are produced electronically, provide control at the entrance door. These products, which operate with a magnet-like system, require electricity to be activated. When electricity is supplied, the plates on the system act as magnets and attract and hold the metal in return with high attraction. When the magnet is not powered, the gravitational force also disappears. According to the companies' choices, they have different holding and carrying capacities in the form of 60 kg, 180 kg, 280 kg and 500 kg.
