

## K 280 P PIN LOCK

Electric Strike

280 Kg. Holding Capacity

Open Without Power  
(Fail Safe)

High quality

12V DC

Pin locks are locks that we know as solenoid bold pin locks. Pin locks work by bolting the cylindrical stainless latch bolt to the moving parts. Pin locks that continue to operate with 12 volt DC energy can be used in metal doors, pvc doors and wooden doors. With 280 kg holding capacity, K 280 P is locked when there is electricity with its “Fail Safe” feature and it is open when the electricity is cut. In this way, they prevent people from being locked inside in case of power cuts.
